

Parabolic Screen Filters

(Part Nos. 2873 and 2875)

Thank you for purchasing another fine product from Pentair Aquatic Eco-Systems. The all stainless steel, low head, parabolic screen filter will give years of faithful service.

When placing this unit in its working position, you will need to take care that you get the inlet overflow weir exactly level. You can use shims for final leveling after beginning operation, as it is fitted with flexible couplings.

Every type of solid waste is a little different. Some are completely self-cleaning. That is, they push themselves into the waste gutter. Others tend to stop and build up somewhere on the filter screen. We suggest installing your filter in a temporary position at first, so that you can tip it forward or backward to obtain the best self-cleaning action before permanent positioning.

The bar screen is designed to be easily removed for cleaning, but that design can leave a gap along both sides that needs to be taped prior to use. A $\frac{3}{4}$ " wide piece of electrical tape, duct tape or other tape will do. Otherwise, you can wedge the handle down to close the gap.
