

Surface Skimmers

(Part Nos. S750B, S750W)

Thank you for purchasing this surface skimmer. This is a simple way to remove floating leaves and other surface debris while at the same time reducing the surface tension of your tank or pond. The skimmer inlet always floats just below the surface so fluctuating water levels of up to 5" will not affect performance. The skimmer is made from either black or white ABS Cyclac for a strong, durable construction. The catch basket will hold about two handfuls of leaves and lifts out easily for cleaning. Rated 20–50 gpm (76–208 Lpm). A 1½" female pipe thread in the base allows for easy installation into your existing drain lines. May be used in siphon and gravity-flow applications.
